You are warmly welcome to the leading Central European Congress of Life Sciences Eurobiotech 2010 with the main theme being "White Biotechnology". The Congress is the third edition of the international event which gathers over 400 of the most prominent representatives of science and business in biotechnology sector from Central Europe and from all over the world. We expect participants from Slovakia, The Czech Republic, Hungary, Ukraine and Lithuania as well as from other countries, with the aim of creating a real platform for international meetings.

The Congress will be a continuation of the conferences cycle started in 2007, dedicated to particular fields of biotechnology. Eurobiotech 2007 was devoted to "Green Biotechnology" while the Congress held in 2008 was focused on "Red Biotechnology" problems. In 2010 we shall concentrate on "White Biotechnology". The Congress will be held under the auspices of Rector of the University of Agriculture, Rector of the Jagiellonian University as well as under the patronage of the European Federation of Biotechnology and Polish Federation of Biotechnology.

The Eurobiotech Congress will present an opportunity for science and business exchange thanks to the combination of presentations, discussions, academic lectures and poster sessions with exhibition of technology and new products. The exhibition is an ideal platform for promoting companies from different sectors of white biotechnology: biofuels, bioenergy, environment protection, biomaterials, food processing, cosmetics industry, biotechnology in production processes, patent firms, consulting, venture and fund investment companies.

Taking into account success from the previous years we are confident that it will soon become one of the most celebrated biotechnology sector events in Central Europe!
